EDUCATION

University of Michigan

Bachelor of Science in Engineering in Data Science, Minor in Philosophy

Ann Arbor, MI

Expected May 2028

- GPA: 3.87/4.0
- Relevant Courses: Database Management Systems, Introduction to Data Science, Data Structures and Algorithms
- Student Orgs: Tau Epsilon Kappa (DEI Chair of Professional Technical Fraternity), Net Impact Consulting (Student Consultant), Michigan Innovation Ventures (Founding Engineer)

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy, Scikit-learn, SciPy, Matplotlib, Seaborn), C++, SQL (Postgres & Oracle)

Data & AI Concepts: RAG, Vector Databases, Time Series Analysis, A/B Testing, API Integration, Distribution Analysis

Tools & Platforms: Tableau, Power BI, Git, Linux, Qualtrics, SPSS, Excel

PROFESSIONAL EXPERIENCE

Student Consultant

Jan. 2026 – Present

Net Impact - University of Michigan, Ann Arbor, MI

- Client:** Early-stage AI software startup focused on sustainability
- Performed rigorous Model Evaluation on 500+ unique prompts, identifying and categorizing hallucination patterns to prevent critical errors in client deliverables
- Synthesized qualitative error logs into actionable weekly reports for client stakeholders, bridging the gap between raw model outputs and strategic product improvements

Data Analyst Intern

Sep. 2024 – Aug 2025

Automotive Futures, Ann Arbor, MI

- Designed and deployed a Qualtrics survey to generate insights into undergraduate student views of the automotive industry, yielding over 3,400 responses to inform research initiatives
- Analyzed large survey dataset using R and SPSS to identify variations in sentiment across demographic groups
- Translated complex research findings for diverse audiences, including an academic presentation at the UROP Symposium and public-facing data visualizations on the company website

ACTIVITIES

Data Analyst

Sep. 2024 – Present

Michigan Data Science Team, Ann Arbor, MI

- Engineered a cohesive master dataset by cleaning and merging over 15 disparate economic time series datasets
- Communicated findings from a time series analysis (using Python and ARIMA modeling) on key economic trends to audience of varying technical levels, winning the 'Best Presentation Award' for clarity.
- Automated real-time cryptocurrency news monitoring by developing a Python script to fetch data from a news API, generate summaries via the OpenAI API, and post insights through the Twitter API every 6 hours

PROJECTS

Probabilistic Text Classifier | C++, ML, NLP

- Built a machine learning classifier from scratch in C++ to automatically categorize student forum posts, achieving 92% accuracy
- Implemented a "bag of words" model to process and analyze text to efficiently manage a vocabulary of unique words and compute frequency statistics needed for the algorithm
- Constructed an efficient data processing system utilizing C++ STL containers to parse training data from CSV files

Steam Player Engagement & Growth Lifecycle Analysis | Python, Pandas, Numpy, SciPy, Matplotlib

- Engineered a standardized "Growth Score" metric using Log-Linear regression residuals ($R^2 \approx 0.68$) to quantify performance relative to launch size, effectively decoupling a game's long-term trajectory from its initial scale
- Segmented market performance by genre and monetization to identify categories that systematically exceed expected growth benchmarks, revealing that Paid Multiplayer titles outperform Free-to-Play counterparts
- Validated statistical assumptions through visual analysis, employing Q-Q Plots and Log-Transformed Histograms to confirm Log-Normal distribution characteristics
